Open Access

Open Access is the free, immediate, online availability of research articles coupled with the rights to use these articles fully in the digital environment. Open Access ensures that anyone can access and use these results—to turn ideas into industries and breakthroughs into better lives.
Stephen Hawking's expanding universes thesis breaks the internet

Demand for 1966 PhD work, made freely available for the first time, crashes Cambridge’s repository website

EThOS @EThOSBL · 1h
EThOS has 540,865 UK thesis titles, wow! Of which over half are already in digital format - either born-digital or digitised from print. 300 pages per thesis x 280,000 theses = 84million pages of unique research. That makes us happy.

#ThesisThursday
What is ORA?

- The **Oxford University Research Archive** was established in 2007. It provides a permanent and secure archive of the university’s research and a means for institutional **compliance** with funders’ Open Access requirements.

- ORA is a central strategic service and is included in the university’s statement on Open Access

- The University of Oxford is strongly committed to ensuring the **widest possible dissemination** of research.
ORA as a central strategic service

“The Oxford Research Archive (ORA) was launched by the University in 2007 as a permanent and secure online archive of research materials produced by members of the University of Oxford. We will enhance the coverage and features in ORA and ease of use to provide a single point of public access to electronic copies of peer-reviewed journal articles, conference proceedings by Oxford authors and Oxford research theses. This will also provide a means for institutional compliance with funders’ Open Access requirements.”

http://openaccess.ox.ac.uk/home-2/open-access-at-oxford/
Number of theses in ORA – 11,662
Number of theses available in full-text – 6,814
